

# Crossfire® Financial Reporting Platform

Your Integrated Financial Reporting Solution

## Crossfire Financial Reporting Platform

For the first time since XBRL was introduced, there is a single product that can be used for tagging, analytics, and financial reporting. Rivet Software, the leading provider of financial reporting and analytics solutions, is excited to offer the Crossfire Financial Reporting Platform. Over 150,000 development hours have been invested in Crossfire which adds up to unequalled product performance. Crossfire is the most powerful and user-friendly XBRL solution yet developed and includes increased functionality for detail tagging. The end user will experience the highest level of performance with the least amount of complexity in an XBRL software solution on the market today. Crossfire is designed for all accountants and financial professionals from those seeking an XBRL add-on tagging solution to those looking for a fully automated, internal and external, XBRL financial reporting solution.

## Benefits for Tagging

Whether you need to block or detail tag your 10-Qs and 10-Ks or tag your mutual fund Risk/Return or summary prospectus, Rivet's Crossfire Financial Reporting Platform is the right solution. Crossfire is a collaborative tagging solution that shields accountants from the complexity of XBRL. Many SEC filers are concerned about the time and effort required to prepare XBRL filings for both block and detail tagging. Crossfire includes tagging, analytic, and reporting features that will benefit users throughout your organization including:

- Help Me Tag™ and tag optimization to drastically reduce the time it takes to detail tag your notes and disclosures.
- Validation ensures that your document complies with the EDGAR filing rules.
- Multi-user collaboration lets multiple users work on your filing simultaneously.
- Task-based workflow guides companies and auditors through a comprehensive, yet easy to understand process.
- Powerful search engine includes industry statistics of element usage to assist you in quickly selecting the most appropriate tagging element.
- Change tracking and versioning provides a permanent record of all changes to your filing documents for full audit control.
- Familiar Excel® environment within Crossfire allows you to drag and drop line items directly onto your financial statements, notes and disclosures.
- Templates retain data for future use, so your ongoing filing effort is minimized.

## Benefits for Analysis and Reporting

The Crossfire Financial Reporting Platform also includes a robust and sophisticated web-delivered, analytical application that supports the aggregation and analysis of information from Interactive Data (XBRL) filings, ERP systems, data warehouses, and traditional financial data feeds, such as Thomson Reuters. Its remarkable support for XBRL allows users to easily aggregate and analyze data from multiple XBRL sources such as the SEC (Corporate Financials and Mutual Fund Risk/Return data), FDIC Bank Call data, and international sources such as the Japanese, German, and Shanghai stock exchanges. Crossfire can also incorporate transactional information directly from your GL, CPM, ERP, or other operational system inside your company to fully automate your financial reporting. Crossfire Financial Reporting Platform is a customizable and scalable solution that can accommodate even the largest of organizations. Analytical features include:

- Peer to peer benchmarking helps accountants and other business users gather data from around the globe and provide comparisons to similar companies with just a few clicks.
- Rivet's Crossfire Controller and CFO packages allow users to easily gather, merge, and analyze data from multiple XBRL sources such as the SEC, FDIC, and your own GL, CPM, or ERP system.
- Generate your own key performance indicators (KPI's), or use those included in Crossfire, or create reports that compare your company to your peers in seconds using our powerful benchmarking tool.
- Financial users are in complete control of data aggregation which means your IT department doesn't need to get involved.

Transparency, comparability, consistency and easy access to data all add up to a friendly environment for all business users.

## Leveraging the Power of Microsoft® Office 2007

Rivet Software is committed to providing the best experience possible for the end user which means a product designed to take advantage of one of the most familiar software packages on the market today – Microsoft Excel®. Rivet’s development team designed Crossfire to take advantage of all the features and improved performance of Excel 2007 and even Microsoft’s latest version – the recently released Excel 2010.

One of the most exciting features of Crossfire is the ability to publish reports in just about every applicable format including HTML, PDF, Word, Excel 2003, Excel 2007 and Excel 2010. This gives your auditors, management team, or anyone who needs to review your reports a simple and easy way to access your information.

Crossfire offers the highest level of automation and efficiencies found in an XBRL solution on the market today. If you’re not doing detail tagging yet, you will be very soon. Crossfire is the most innovative solution on the market and it’s based on the platform that has been tested and is currently being used by many Fortune 500 companies.

The Crossfire Financial Reporting Platform is designed to get you through the SEC XBRL mandate today and supply you with the best financial reporting and analysis features yet available, so you can make XBRL work for you. SEC compliance is just the starting point. With Crossfire, you can become an active participant in the XBRL supply chain. Lead the journey toward the financial transformation of your company.
